

## Overview

Employee Information System (EIS) simplifies employee information management at client Global Technology Infrastructure (CGTI) across regions providing a tool for employee information capture and providing the managers a view of their span of control.

## Client

One of the leading bank in the world.

## Challenge

To facilitate extensive employee information management the client needed a system, which shows the organisation chart and collect the whole information in a single depository.

## Solution

Nucsoft offers an easy to use and powerful interface for searching of employees across the organisation.

Modifications to the employees including change of employees, promotions can be managed on the click of a button. Employee Information System (EIS) provides an integrated Organisation Chart generation facility.

Incorporated drill down on the detailed hierarchy and elegant search makes using EIS all the more comfortable to the user. Organisation chart can be generated for a specific Manager and the hierarchy below or for the organisation as a whole.

With the data of all the employees organised in a central repository, web based reports can be generated to suit the business needs. Printable reports are dynamically generated based on user selection. Report templates can be defined and stored to facilitate later use.

## Benefits

EIS is deployed under Web Security Shell of CGTI\_EMEA, imparting it the necessary security from access by unauthorised authors. . EIS implements dynamic role linked menu control. With this role linked menu control the users can access only those sections of the application to which they have access rights. Access Control is also implemented in a granular manner by restricting access to particular information pertaining to an employee thus restricting strictly personal information to rightful users only.
